

ASSIGNMENT 4

Simek, Kathryn

2020-09-20

Load the ggplot2 package

```
library(ggplot2)
theme_set(theme_minimal())

## Set the working directory to the root of your DSC 520 directory
setwd("C:/Users/katie/OneDrive/Documents/GitHub/dsc520")

## Load the 'data/r4ds/heights.csv' to
heights_df <- read.csv("data/r4ds/heights.csv")
```

Create boxplots of sex vs. earn and race vs. earn using `geom_point()`

and `geom_boxplot()`

sex vs. earn

```
ggplot(heights_df, aes(x=sex, y=earn)) + geom_point() + geom_boxplot()
```

race vs. earn

```
ggplot(heights_df, aes(x=race, y=earn)) + geom_point()+ geom_boxplot()
```

Using `geom_bar()` plot a bar chart of the number of records for each `sex`

```
ggplot(heights_df, aes(sex)) + geom_bar()
```

Using `geom_bar()` plot a bar chart of the number of records for each race

```
ggplot(heights_df, aes(race)) + geom_bar()
```

Create a horizontal bar chart by adding `coord_flip()` to the previous plot

```
ggplot(heights_df, aes(race)) + geom_bar() + coord_flip()
```

Load the file "data/nytimes/covid-19-data/us-states.csv" and assign it to the covid_df dataframe

```
covid_df <- read.csv("data/nytimes/covid-19-data/us-states.csv",
                     col.names = c("date", "state", "fips", "cases", "deaths"))

## Parse the date column using 'as.Date()'
covid_df$date <- as.Date(covid_df$date)

## Create three dataframes named 'california_df', 'ny_df', and 'florida_df'
## containing the data from California, New York, and Florida
california_df <- covid_df[covid_df$state == "California",]
ny_df <- covid_df[covid_df$state == "New York",]
florida_df <- covid_df[covid_df$state == "Florida",]
```

Plot the number of cases in Florida using geom_line()

```
ggplot(data=florida_df, aes(x=date, y=cases, group=1)) + geom_line()
```

Add lines for New York and California to the plot

```
ggplot(data=florida_df, aes(x=date, group=1)) +  
  geom_line(aes(y = cases)) +  
  geom_line(data=california_df, aes(y = cases)) +  
  geom_line(data=ny_df, aes(y = cases))
```

Use the colors “darkred”, “darkgreen”, and “steelblue” for Florida, New York, and California

```
ggplot(data=florida_df, aes(x=date, group=1)) +  
  geom_line(aes(y = cases), color = "darkred") +  
  geom_line(data=ny_df, aes(y = cases), color="darkgreen") +  
  geom_line(data=california_df, aes(y = cases), color = "steelblue")
```

Add a legend to the plot using `scale_colour_manual`

Add a blank (" ") label to the x-axis and the label "Cases" to the y axis

```
ggplot(data=florida_df, aes(x=date, group=1)) +
  geom_line(aes(y = cases, colour = "Florida")) +
  geom_line(data=ny_df, aes(y = cases, colour="New York")) +
  geom_line(data=california_df, aes(y = cases, colour="California")) +
  scale_colour_manual("",
    breaks = c("Florida", "New York", "California"),
    values = c("darkred", "darkgreen", "steelblue")) +
  xlab(" ") + ylab("Cases")
```

Scale the y axis using `scale_y_log10()`

```
ggplot(data=florida_df, aes(x=date, group=1)) +  
  geom_line(aes(y = cases, colour = "Florida")) +  
  geom_line(data=ny_df, aes(y = cases, colour="New York")) +  
  geom_line(data=california_df, aes(y = cases, colour="California")) +  
  scale_colour_manual("",  
    breaks = c("Florida", "New York", "California"),  
    values = c("darkred", "darkgreen", "steelblue")) +  
  xlab(" ") + ylab("Cases") + scale_y_log10()
```
